QUICK START INSTRUCTIONS

Your development system has been shipped to you fully assembled. The following instructions explain how to get your system up and running.

1. Remove the system assembly from the box.

2. Unfold the VTC-9F cable and connect it to an available COM port (COM1, COM2, COM3, or COM4) on your desktop PC.

3. Install PC SmartLINK on your desktop PC by doing the following:

    a. Create a subdirectory on the hard drive of your PC:

        ```
        MD C:\smartlk <ENTER>
        ```

    b. Copy the contents of the SmartLINK IV disk into this subdirectory:

        ```
        COPY A:*.* C:\smartlk
        ```

    c. Modify your AUTOEXEC.BAT file to add the path variable for PC SmartLINK IV:

        ```
        PATH=C:\smartlk
        ```

4. Run PC SmartLINK by typing the following:

    ```
    SL <ENTER>
    ```

5. After the Octagon Systems copyright screen is displayed, press <ENTER>.

6. When requested to select the type of system you are using, choose:

    ```
    Micro PC-DOS
    ```

    PC SmartLINK automatically configures the serial port for communication with your system.

7. Power on your system.
